

February 12, 2018

Dear parents and guardians:

Our goal at Murray Pediatrics is to insure that you are educated when it comes to vaccinations that your child receives. The state of Kentucky is now requiring children, grades K-12 to have the Hepatitis A vaccination. Many children have already received this vaccination in their regular scheduled vaccines.

The Menveo (Meningitis) vaccine is also required for all 16 year olds. Most children received this vaccine at their 6th grade physical (7th grade physical for TN students), but KY is now requiring a booster at age 16.

Please contact your child's provider to insure your child has not already received these vaccines, to prevent double vaccination. Murray Pediatrics is happy to schedule an appointment for Hepatitis A and Menveo vaccination, as well as all other vaccines your child may need. Please contact our office at (270) 759-9223 to obtain information on vaccines your child has already received or to schedule an appointment for required vaccination.

Your child may be required to have a well visit prior to vaccination, if they have not been seen in our office in the last year. This is so we provide the best care to your children.

Upon receipt of vaccinations in the Murray Pediatrics office, you will receive an up to date immunization certificate as proof of current vaccinations.

Our hours of operation are Monday through Friday, 8:00 AM to 5:00 PM. Our front desk staff will be happy to assist you.

Sincerely,

The Team at Murray Pediatrics
